Introduction	1
Personnel	2
Publications and Reports	4
Research Projects	
I Microwave and Physical Electronics	
A Construction of 5-mm Orford Type Tube	5
B High Power Magnetron Research	5
C Cathode Research	
1 Oxide Cathode Research	7
2 Spectral Emissivity of Tungsten	15
3 Electron Emission in Accelerating and Retarding Fields	15
D Ionization Gauge Research	16
E Properties of Cathode-ray Screens	16
F Travelling-wave Amplifier Tube	
1 Theoretical Considerations	17
2 Experimental Studies	18
G Transmission of Energy from Radiation on Silicon Crystals	19
II Microwave Physics	
A Microwave Spectroscopy	21
1 Microwave-frequency Bridge	26
2. Audio-frequency Bridge	27
3 Caesium Spectrum	28
4 Nuclear Magnetic Moment of Hydrogen	28
5 Frequency-modulated Spectroscope	29
B Molecular Beams	30
C Low Pressure Gas Discharges	
1 Introduction	35
2 Steady State Low Current Density Discharge Characteristics	38
3 Steady State High Current Density Experiments	41
4 Transient Discharge Characteristics	44
5 Applications	48
D Low Temperature Research	
1 Helium Cryostat	53
2 Properties of Germanium	53
3 Superconductivity of Lead at 1.25 cm	55
4 Nuclear Resonances at Low Temperatures and Strong magnetic Fields	55
5 Properties of Matter at Temperatures below One Degree Absolute	55
6 Theory of "Second Sound" in Helium II	56
E Ferromagnetism at Microwave Frequencies	57
III Modern Electronic Techniques Applied to Physics and Engineering	
A Design and Construction of a Microwave Accelerator	58
B Ultrasonics Research Program	
1 Measurements in Liquid Argon and Liquid Helium	60
2 Absorption Measurements at 200 Mc/sec	64
3. Absorption in Solids	64
4 Relaxation in Paramagnetic Salts	64
5 Attenuation in Single Crystals	65
6 Review Paper on Ultrasonics	65
C High Speed Oscilloscope and High Voltage Pulse-measuring Techniques	66
D Development of Flash Tube	66
E Packaged Units Employing Subminiature Tubes	67
F Cyclotron R-F Project	78
G Ten-cm Sweep-frequency Oscillator	79
H Three-cm Sweep-frequency Oscillator	79

IV	Communications and Related Projects	
A	Modulation Studies Spectrum Utilization Efficiency of Power Utilization, Signal-to Noise Ratios	
1	Modulation Studies	81
2	Properties of Random Noise	81
3	Impulse Noise in Frequency Modulation	82
4	Pulse Modulation Studies	83
5	Multipath Transmission	84
B	Stabilized Oscillators	84
C	Response of Networks to Frequency Transients	85
D	Wave-analyzer Auxiliary Equipment	85
V	Miscellaneous Problems	
A	Study of the R-f Properties of Microwave Generators	87
B	Electronic Differential Analyzer	87
C	Electronic Potential Mapping	89
D	Transient Phenomena in Waveguides	89
E	Broadbanding of a Resonant Impedance	90
F	Reflection and Transmission Coefficients	92
G	Computing Machine for Fourier Transforms	92
VI	Special Report from the Tube Laboratory	93
