

TABLE OF CONTENTS

Personnel	vi
Publications and Reports	xiv
Introduction	xviii

GENERAL PHYSICS

I.	Molecular Beams	1
	Scattering of Low-Temperature Helium Beams	1
	Field Distribution Measurements by the Atomic-Beam Method	4
	Construction of a Scanning Molecular Microscope	9
II.	Radio Astronomy	13
	Polarization Measurements on the Cloud 2 OH Source	13
	Very Long Baseline Interferometry	15
	Pulsar Facility	17
	Pulsar Observations with a Swept-Frequency Local Oscillator	17
III.	Solid-State Microwave Electronics	21
	Varactor Frequency Doubler Imbedding Network Analysis and Design	21
	Electronic Instrumentation	21
IV.	Electrodynamics of Media	23
	Low-Power Frequency Mixing Experiments Using Metal-Metal Point-Contact Diodes	23
	Quantum Theory of Čerenkov Radiation in a Uniaxial Crystal	25

PLASMA DYNAMICS

V.	Plasmas and Controlled Nuclear Fusion	35
	Waves and Radiation	35
	Recent Developments in the Study of Ion Acoustic Waves	35
	Longitudinal Profiles in Argon Plasmas in Plasma Facility 1 (PF 1)	41
	Plasma Diagnostics	47
	High-Pressure Pulsed CO ₂ Laser	47
	Optical Satellites Induced in a Plasma through the Action of Intense, High-Frequency Electric Fields	53
	High-Temperature Toroidal Plasmas	57
	Anomalous Resistivity and Tokamak Regimes	57
	Two-Dimensional Analysis of Tokamak Fusion Reactors	67

CONTENTS

VI.	Gaseous Electronics	71
	Time-Dependent Threshold Characteristics of Pulsed Noble Ion Lasers	71
	Microwave Diagnostics of High-Density Laser Plasmas	73
COMMUNICATION SCIENCES AND ENGINEERING		
VII.	Processing and Transmission of Information	81
	Channel Measurement Receivers for Slowly Fading Nondispersive Media	81
	Variable-Rate Optical Communication through the Turbulent Atmosphere	88
	Poisson Process as a Statistical Model for Photodetectors Excited by Gaussian Light	95
VIII.	Detection and Estimation Theory	103
	Likelihood Ratios and Mutual Information for Poisson Processes with Stochastic Intensity Functions	103
IX.	Speech Communication	113
	Children's Perception and Identification of Stress Constants	113
	Automatic Analysis-by-Synthesis of Vowels	120
	An Interactive Computer Graphics and Audio System Sans Large Budgets and Great Fuss	126
	DYNAMO Graphic System	134
X.	Linguistics	139
	Some Observations on Language Acquisition: The Development of Words	139
	Tests for Echoic Storage Effects	141
	Comprehension of Passive with Reduced Syntactic Cues	143
	Effect of Verbs in a Difficult Completion Task	145
XI.	Cognitive Information Processing	149
	Analyzing the Performance of an Image-Processing System	149
	Approximation of a Matrix by a Sum of Products	157
	Focused Ultrasonic Transducer Design	169
	Tactile Pitch Feedback for the Profoundly Deaf	177
	Operator Interactive Computer Programs for Analyzing Biological Tissue Sections	179
	Character Recognition: Performance of Human Computers	185

CONTENTS

XII.	Communications Biophysics	195
	Aural Tracking of Musical Notes: The Problem of the Missing Fundamental	195
	Arterial Pulse Wave Velocity as an Indicant of Diastolic Pressure	203
	Use of Hardware Character Generator with Small Computers	206
XIII.	Neurophysiology	215
	New Mechanical Devices	215
	Kinematic Thrust Bearing	215
	Precision Angular Tilt Table	216
XIV.	Signal Processing	219
	Power Processing by Two-State Modulation	219
	Waveform Envelope Detection	222
	Author Index	227
